

The GDPR is finally taking effect, but not every company that processes personal data of EU nationals is prepared thoroughly. Those who have not ensured compliance should quickly take actions as every new day carries a risk of heftier penalties. The checklist to be GDPR-ready seems long, but technology today can largely ease the process of achieving compliance.

GigaCentral, a highly convergent solution, helps enterprises and small-medium businesses to fill up the myriad of potential gaps in their GDPR preparation process more quickly and efficiently.

Your answer to GDPR compliance

Secure Storage Space

All personal data is located in secure, reliable and scalable storage instead of being scattered across multiple unprotected platforms.

Encryption & Pseudonymisation

All data is RC-128/AES-256 encrypted.

Data "can no longer be attributed to a specific data subject without the use of additional information" (without use of encryption key).

Data protection from leak due to data hacking or accidental file sharing with a third party.

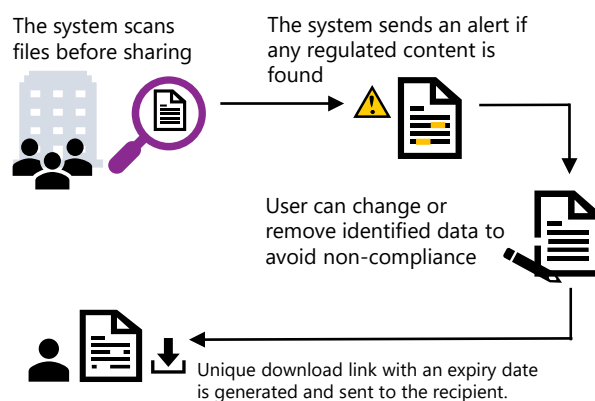

File Analysis and Data Discovery

Data protection officer supervises where and how regulated data is stored and processed.

Point-in-time Disaster Recovery

Allows immediately "restore the availability and access to personal data in a timely manner in the event of physical or technical incident."

Secure Data Transfer to External Parties

Secure Data Sharing for Collaboration

Data is shared among the colleagues through highly secured shared drives.

Manage Access Permission

Administrator controls who can view, download, share and make changes to the files.

GigaCentral largely eases the process of achieving compliance with GDPR. And at the same time, it modernises digital work space, increases efficiency and performance of your organisation.

Use GDPR as an opportunity for modernisation

Storage

- Keep your structured, unstructured and continually growing data in secure storage.
- Archive files instantly for long-term retention.
- Discover and access files on demand.
- Supervise where and how users store and manage sensitive data.

Cloud Backup

- Enjoy automatic data sync and backup to the cloud.
- Download or recover your files immediately in case of a hardware issue or a malware attack.
- Ensure business continuity.
- Add cloud extension to your existing NAS storage and avoid lengthy data migration process.

Collaboration

- Collaborate with your colleagues on files' content within secure shared drives.
- Collaborate on files across multiple offices.
- Access files remotely from iOS and Android mobile devices.
- Manage access permission and track changes and updates.

File Share & Security

- Sync and Share large files easily.
- Share your files to external parties through uniquely generated links.
- Be confident about safety and privacy of the content even during the malware attack as it is encrypted.
- Encryption in transit and with private key on rest.
